MOHAMMAD MAAZ

mohammedmaaz10000@gmail.com 9160190992 LinkedIn GitHub Portfolio

Professional Summary

Backend Developer with hands-on experience building and maintaining RESTful APIs using **Java, Quarkus, and Spring Boot,** with practical exposure to real-world enterprise product development. Skilled in developing, testing, and debugging backend applications, working with relational databases, and collaborating in agile team environments.

Experience

Junior Backend Developer

Cloud Now Technologies **August 2025 – Present**

- Developed and maintained RESTful APIs using Java and Quarkus, handling request validation, error handling, and response structuring.
- Implemented database operations and entity mapping using Hibernate Panache / JPA with PostgreSQL, performing efficient data retrieval, creation, updates, and deletions.
- Documented and validated REST APIs using Swagger UI (OpenAPI) and Postman, ensuring API contracts were well-defined and testable across the team.
- Managed source code using Git, following structured branching and commit workflows in a collaborative team environment using Agile methodology.

Education

Sreenivasa Institute of Technology And Management Studies **2020 - 2024**
Bachelor of Technology in Computer Science and Engineering CGPA: 8.2

Sri Chaitanya Junior College **2018 - 2020**
Class XII CGPA: 9.5

Keshava Reddy School **2017 - 2018**
Class X CGPA: 9.7

Skills

- **Languages**: Java, Python, JavaScript
- **Software Engineering Concepts:** Object-Oriented Programming, Data Structures, Algorithms, Debugging, Design Patterns, SDLC, API Integration.
- **Tools & Technologies:** Postman, Swagger UI (OpenAPI), Maven, Git, GitHub, Jira, JSON
- **Database**: PostgreSQL, MySQL, PG Admin
- **Backend & Frameworks:** Quarkus, Spring Boot, RESTful APIs, Hibernate, Panache, JPA
- **Soft Skills**: Communication, Analytical Thinking, Team Work, Problem Solving, Attention to Detail & Team Collaboration.

Projects

Employee Management System | Spring Boot, JPA, MYSQL, Postman **GitHub**

- Built a RESTful Employee Management System using **Spring Boot**, implementing key CRUD operations for managing employee data in the database.
- Designed and tested **REST APIs** using **Postman**, ensuring better functionality and seamless data flow between the server and client.
- Integrated **Spring Data JPA** for database interactions and to perform efficient operations like data retrieval, creation, updates, and deletions.
- Applied core Spring Framework concepts including dependency injection, service layers, and repository patterns for clean architecture.

AI Email Reply Generator | Spring Boot, React, Gemini API **GitHub**

- Developed an **AI**-powered email reply generator that automates the creation of professional, casual, or friendly email responses based on user input.
- Built the application using **Spring Boot** for the backend and **React** for the frontend, integrating Material-UI for UI components and **Postman** for API testing.
- Integrated the **Gemini API** to generate AI-based email replies, dynamically constructing prompts and processing responses using JSON parsing.
- Gained good experience in API integration, JSON handing, and full-stack development, improving skills in Spring Boot, React, and handling AI-driven responses.
